

Contents

Foreword		i
Preface		iii
Contents		v
- Contact Person -		
1. Climate Modeling		
• A model study of a 1-D radiative-chemical coupled system	<i>Hideharu Akiyoshi</i>	3
• Ultra-high resolution modeling of the tropical atmosphere	<i>Kensuke Nakajima</i>	5
• Development of an atmospheric general circulation model for climate research	<i>Atsusi Numaguti</i>	8
• On the interaction between the circulations in the lower- and mid-latitudes : Meridional distributions of (PV, θ) in the two-three- dimensional models	<i>Masaki Satoh</i>	13
• Mass circulation variations due to seasonal and longer term variations in the middle atmosphere circulation	<i>Kiyotaka Shibata</i>	15
• The study of seasonal variation of ozone by a general circulation model	<i>Isamu Yagai</i>	17
2. Atmospheric and Oceanic Environment Modeling		
• Study of basin-scale ocean circulation related to global chlorophyll distribution	<i>Masahiro Endoh</i>	21
• Development of the transport, transformation and removal model for acidic and oxidative pollutants in the east Asia	<i>Junji Sato</i>	25
• A study of modeling of local CO ₂ circulations	<i>Yasuo Sato</i>	27
• Ecosystem model in Tokyo bay part I : Modeling of circulation	<i>Masataka Watanabe</i>	30
3. Geophysical Fluid Dynamics		
• Experimental study on the three dimensional spherical convections with the parameters of planetary atmospheres	<i>Yoshi-Yuki Hayashi</i>	37
• Baroclinic instability of elliptic vortex in an imposed strain field	<i>Takeshi Miyazaki</i>	42
4. Other Research		
• Ab initio MO studies on allylic chloropropenes	<i>Hiroyuki Shinoda</i>	51
Supercomputer SX-3 Overview		59
